Part III Reading Comprehension (阅读理解, 40 分, 20×2)

Directions: There are 4 passages in this part. Each passage is followed by some questions or incomplete sentences. For each of them there are 4 choices marked A, B, C and D. You should decide on the best choice and mark the corresponding letter on the Answer Sheet.

Passage One

Many post-80s couples are complaining that going to the movies, shopping or attending parties have become impossible since their kids were born. That's the way most parents are living their lives, no weekends of their own, no time to visit friends, not even a chance of promotion in their jobs.

Asking help from their parents might be a way out, but problems are that some aging parents are not strong enough to take care of the kids, and that the kids may also become too spoiled by their grandparents.

Then, here comes a solution: families with kids can form a small group, and parents of each family can take turns to look after all the kids in this group on weekends. Thus, other parents can have some quiet time and feel free to do something they've been planning for a long time. At the same time, the kids can make new friends and won't be hanging around their parents all day long. This is baby-pooling.

Passage Two

It is a terrible illustration of man's weakness to nature, and the tsunami (海啸) that struck the Japanese coast in March, 2011 has illustrated the difficulty of fighting against natural disasters, even for a prosperous nation.

Totally preventing tsunami-damage is impossible. But there is much that can be done to minimize damage and loss of life. Measures that can be taken include designing solid buildings, and developing early-warning systems, public education programs and evacuation (疏散) strategies. Moreover, the approach of a tsunami is possibly picked up by the sensors of complicated international warning systems. Countries can use radio and television broadcasts as well as loudspeaker networks to warn the public.

But an early warning system depends on how far the tsunami strikes; if it's close by, the warning system is not going to be very effective. When people are faced with an unstoppable force like a tsunami, the massive waves created by events like underwater earthquakes, the best course of action for them is to get inland and to the higher ground as quickly as possible.

Passage Three

Global warming is causing more than 300,000 deaths and about \$125 billion in economic losses each year, according to a report by the Global Humanitarian Forum, an organization led by Annan, the former United Nations secretary general.

The report, to be released Friday, analyzed data and existing studies of health, disaster, population and economic trends. It found that human-influenced climate change was raising the global death rates from illnesses including malnutrition (营养不良) and heat-related health problems.

But even before its release, the report drew criticism from some experts on climate and risk, who questioned its methods and conclusions.

Along with the deaths, the report said that the lives of 325 million people, primarily in poor countries, were being seriously affected by climate change. It projected that the number would double by 2030.

Roger Pielke Jr., a political scientist at the University of Colorado, Boulder, who studies disaster trends, said the Forum's report was "a methodological embarrassment" because there was no way to distinguish deaths or economic losses related to human-driven global warming amid the much larger losses resulting from the growth in populations and economic development in vulnerable (易受伤害的) regions. Dr. Pielke said that "climate change is an important problem requiring our utmost attention." But the report, he said, "will harm the cause for action on both climate change and disasters because it is so deeply flawed (有瑕疵的)."

However, Soren Andreasen, a social scientist at Dalberg Global Development Partners who supervised the writing of the report, defended it, saying that it was clear that the numbers were rough estimates. He said the report was aimed at world leaders, who will meet in Copenhagen in December to negotiate a new international climate treaty. In a press release describing the report, Mr. Annan stressed the need for the negotiations to focus on increasing the flow of money from rich to poor regions to help reduce their vulnerability to climate hazards while still curbing the emissions of the heat-trapping gases. More than 90% of the human and economic losses from climate change are occurring in poor countries, according to the report.

Passage Four

Reaching new peaks of popularity in North America is Iceberg Water, which is harvested from icebergs off the coast of Newfoundland, Canada.

Arthur von Wiesenberger, who carries the title Water Master, is one of the few water critics in North America. As a boy, he spent time in the larger cities of Italy, France and Switzerland, where bottled water is consumed daily. Even then, he kept a water journal, noting the brands he liked best. "My dog could tell the difference between bottled and tap water," he says.

But is plain tap water all that bad? Not at all. In fact, New York's municipal water for more than a century was called the champagne of tap water and until recently considered among the best in the world in terms of both taste and purity. Similarly, a magazine in England found that tap water from the Thames River tasted better than several leading brands of bottled water that were 400 times more expensive.

Nevertheless, soft-drink companies view bottled water as the next battle-ground for market share—this despite the fact that over 25 percent of bottled water comes from tap water: PepsiCo's Aquafina and Coca-Cola's Dasani are both purified tap water rather than spring water.

As diners thirst for leading brands, bottlers and restaurateurs salivate (垂涎) over the profits. A restaurant's typical mark-up on wine is 100 to 150 percent, whereas on bottled water it's often 300 to 500 percent. But since water is much cheaper than wine, and many of the fancier brands aren't available in stores, most diners don't notice or care.

As a result, some restaurants are turning up the pressure to sell bottled water. According to an article in The Wall Street Journal, some of the more shameless tactics include placing attractive bottles on the table for a visual sell, listing brands on the menu without prices, and pouring bottled water without even asking the diners if they want it.

Regardless of how it's sold, the popularity of bottled water taps into our desire for better health, our wish to appear cultivated, and even a longing for lost purity.
